  Comprehensive Project Management Solution Enables Cross-Project Analysis,
      Uniform Processes, Collaboration and Control by Project Teams
      PHILADELPHIA, April 19 /PRNewswire/ --
      Primavera Systems(R), Inc., the leading developer of enterprise and
Web-based project management, control and execution software, today
announced the release of Version 7.0 of **Primavera** Expedition(R), the
company's enterprise-class project control software. **Primavera** Expedition
7.0 enables engineering and construction professionals to successfully
deliver all of their projects and programs by drawing upon new
cross-project analytical capabilities; uniform, customizable processes; a
collaborative environment to speed communication and approvals; and
effective contract management for on-time, on-budget projects. **Primavera**
Expedition 7.0's comprehensive project control environment is the first to
provide a global perspective of the multi-language, multi-currency projects
and programs a company has underway.
      Primavera Expedition represents the fusion of a robust,
client/server project control solution with the collaborative, Web-enabled
functionality offered through **Expedition Express** (TM). This release of
Primavera Expedition provides the in-depth project tracking and analysis
required by power users-typically the project managers, while making
relevant project information accessible to nomadic or remote users-such as
third parties or job-site personnel-that contribute to or benefit from the
project information.
      " **Primavera** created the project control commercial-software category
when we released the first version of Expedition 13 years ago," said
Richard Faris, president of **Primavera** System's Concentric Division.
"Building on that legacy, **Primavera** Expedition 7.0 elevates collaboration
and control of entire project portfolios to a new level, enabling
organizations to deliver high-quality projects while minimizing risks."
      "New **Primavera** Expedition 7.0 represents not only advances in
technology and project control, but significant advances in usability,"
said Daniel Conery, **Primavera** Expedition product manager. "We worked
closely with customer development partners representing leading
construction companies as well as best-of-breed private and public facility
owners to make sure we addressed their functional and ease-of-use
requirements in **Primavera** Expedition."
      Primavera Expedition 7.0 is the first project control solution to
provide secure access to project information by all members of the project
team with custom, role-specific workspaces and capabilities:
      -- Executives and program managers benefit from the faster
decision-making
         that comes from **Primavera** Expedition 7.0's unique global
         project-portfolio analysis, despite different languages or currencies
         used for the day-to-day project management. The unmatched Enterprise
         Project Structure makes these cross-project roll-ups and portfolio
         analyses both useful and meaningful. Regardless of where projects are
         geographically located or the skills of the project teams, **Primavera**
         Expedition ensures consistent project workflow and uniform processes.
      -- Project managers can take immediate control of new projects with
the
         new Jumpstart wizard that allows them to quickly set up projects in
         accordance with established procedures and their company's own best
         practices. **Primavera** Expedition 7.0 further enables project
managers
         to account for every project detail, such as change requests, design
         reviews and approvals, and payment requisitions. It ensures all
         materials necessary for a project are designed, specified, ordered

and

delivered on time to avoid delays.
-- Operations and field workers have an updated, easier-to-use
Primavera
Expedition interface for accessing only the project information and
action lists they need in order to do their jobs. With just two mouse
clicks from anywhere in the software, they can quickly and "on the
fly"

create new project documents such as notices or RFIs. Through
Primavera Expedition's Web-based or replicated project information,
nomadic workers may collaborate on project details and keep the home
office personnel up to date with what is happening at the project
site.

Primavera Expedition 7.0 includes other key new capabilities to
ensure that project participants are able to anticipate issues and control
projects to their successful conclusions:
-- Expedition Project Center(TM): Provides a centralized view of all
project information through a **dashboard** -like workspace of graphical
indicators that highlight project and program performance. This
role-based workspace transforms project data into actionable
information for each member of the project team. Through customizable
thresholds and interactive alerts, nothing goes undetected or
unresolved. The Expedition Project Center provides singular
visibility
into project and cross-project trends and variances, and enables
users
to drill down with a single click to more closely study project
details.
-- Project templates: Enables companies to establish their own best
practices by cataloging standard project information, such as
contacts,
drawings, submittals and other documents from similar projects. Users
will take advantage of project templates with the Jumpstart wizard to
easily bring every project into the **Primavera** Expedition
enterprise-
wide project database.
-- Global customization: Includes support for more than 16 languages
and
150 currencies. Although **Primavera** Expedition 7.0 comes with
standard
forms and more than 200 standard reports, headings and fields are
also
easily customizable to match a company's unique terminology.
-- Microsoft(R) Word integration: **Primavera** Expedition 7.0 includes
support for Microsoft Word templates to quickly and easily create
project documents in accordance with approved company standards.
-- Expedition Analyzer(TM): An extension to **Primavera** Expedition
7.0,
Expedition Analyzer enables managers to investigate
multi-dimensional,
real-time project data, resulting in new insights and faster
decision-making. Featuring OLAP (Online Analytical Processing)
technology, Expedition Analyzer integrates information from multiple
projects for ad hoc queries and what-if analysis. Predefined data
cubes allow immediate analysis without the need for training.
Primavera Expedition 7.0 is a 32-bit application, built on a
high-performance, scalable client/server architecture and SQL relational
database. The client system requires Windows 95/98/NT and 64 MB RAM. The
server requires Windows 95/98/NT or Novell 3.1x or higher with 128 MB RAM.
Primavera Expedition is available through **Primavera** 's worldwide
channel of authorized representatives or direct from **Primavera** . Pricing
for **Primavera** Expedition begins at $2500 per concurrent user. Expedition
Analyzer pricing begins at $995 per named user.
For more information, interested parties may contact **Primavera**
Sales by calling 800-423-0245 or 610-667-8600, or by sending an email to
info@ **primavera** .com.
About **Primavera** Expedition
Primavera Expedition is a client/server, project control solution
that addresses the demands of multiuser, multiproject and multisite

environments. Version 7.0 brings together all facets of the project planning lifecycle-from project initiation to project organization through project execution and finally to the project hand-off. It helps manage all changes -- from differing site conditions to plan modifications -- that occur from the inception of a project, ensuring that all changes to contracts are recorded, allocated and tracked through to resolution. **Primavera** Expedition enables project teams to work together in real time, sharing every contract change every time the database is updated regardless of their location. Other **Primavera** Expedition products include **Expedition Express** , a Web-based collaboration tool which extends the power of **Primavera** Expedition to third-party participants such as remote team members and field superintendents; Expedition TGIF, which integrates Expedition contract and cost information with Timberline Gold Collection accounting; and Expedition Analyzer, which summarizes information from multiple projects for multi-dimensional queries and analysis.

About **Primavera** Systems

Founded in 1983, **Primavera** Systems, Inc. is the leading provider of innovative project management, control and execution software to help customers successfully manage their projects, programs and resources. The company serves a broad range of industries, including engineering, construction, utilities, energy, technology, telecommunications, chemical processing, financial services, manufacturing, aerospace and defense. **Primavera** 's core products include **Primavera** Enterprise(R), **Primavera** Project Planner(R) (P3(R)), **Primavera** Expedition(R), TeamPlay(TM) and SureTrak Project Manager(R) (SureTrak(R)). The company is headquartered in Bala Cynwyd, a suburb of Philadelphia, Pennsylvania, with offices in Chicago, New Hampshire, New York, San Francisco, Hong Kong and London. More information about **Primavera** and its products is available via the World Wide Web at http://www. primavera .com.
